- Inbound and outbound shipment visibility
- Manage product quality
- Share supply chain information across systems
- Lower supply chain risk
- Reduce operating costs
- Automate manual processes
- Access to our neutral repository of information

EXECUTIVE SUMMARY

Today's global supply chains offer exciting new opportunities while also exposing you to new areas of risk. Internal and external systems, geographical scope, the multitude of vendors involved, a myriad of time zones, as well as cultural differences are just a few of the challenges that make managing the flow of your supply chain complex. Issues with product quality are at an all-time high. Useful information is often stored across multiple systems that are typically disconnected. Commercial software vendors offer tools, but often lack the supply chain expertise to significantly improve your business processes and reduce your risk.

You need a company that can provide proven supply chain solutions. ClearTrack is that company. Our team has years of supply chain experience. Our software offers a fully integrated suite of solutions from which you can choose, depending on the specific business issues that you need to deal with first. Our solutions have been implemented in some of the world's largest retailers, manufacturers, and logistics companies. We are already integrated with thousands of vendors, factories, inspection companies, carriers, and supply chain partners around the world, as well as a variety of common enterprise software packages. We can also help you lower your supply chain costs by providing software specifically built to help you manage the growing challenges of a complex global supply chain.

From product quality at the point of origin to final delivery, ClearTrack is the on-demand supply chain solutions provider you should get to know.

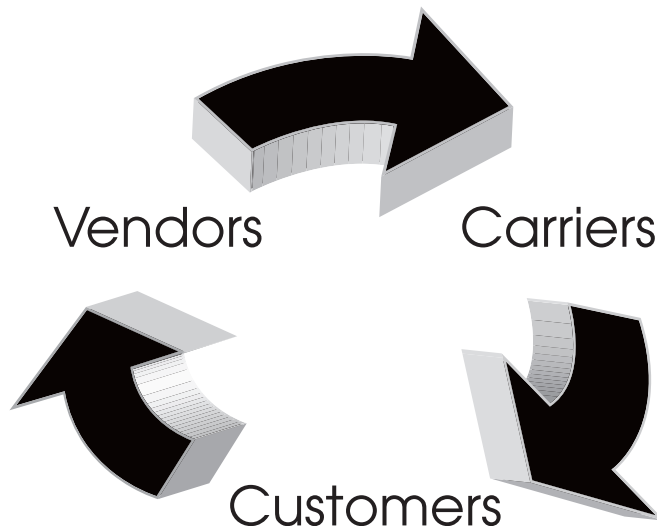

GLOBAL PRODUCT VISIBILITY

Increasing the breadth of visibility across your supply chain can provide significant benefits to the bottom line.

The key is your ability to identify unexpected business activities, missed items, changes and issues as early as possible to proactively and efficiently react ... before they impact customers.

The result is cost and time savings generating ongoing improvements in employee productivity, cycle times and profitability.

Across your global sourcing network unexpected things happen. Products fail quality standards, import shipments get delayed and slow U.S. Customs activities are a few of the disruptive activities a global product visibility solution will help manage. By quickly recognizing out-of-tolerance supply chain events and having pre-established action plans, you can speed up your ability to respond.

Overview

WWW.CLEARTRACK.COM

ClearTrack is different. We have a long track record of success helping large retailers, manufacturers, and logistics companies maximize their supply chain activities using industry best practices.

Here's why they chose us:

- On-demand solutions leveraging a best practices approach to supply chain operations.
- Integrated plug-n-play software modules and coordinated services allow a building block approach to improving your operations.
- End-to-end purchase order lifecycle control, from vendor quotes to store door, reverse logistics and performance audits.
- Complete visibility to domestic and international trading partner activities.
- Proven implementation methodology with flexible modules to meet your needs.
- Fast and modular client rollouts. We move at your pace and provide a quicker ROI for you.
- Electronic communications with all trading partners.
- Neutrality that ensures you greater confidence in the accuracy of information.
- Configurable dashboards and analytics.
- Flexible terms and licensing options

SHAREHOLDER VALUE

Supply chain activities can directly impact shareholder value in either a positive or negative direction. We can all agree that shareholder value is typically tied to your stock price.

Your company's stock value is usually influenced by changes in revenue, expenses, profit margin and market perception. A major supply chain disruption or product recall can send your market value spiraling downward, while reductions in cost and faster cycle times can have a similar, yet positive impact.

ClearTrack's On-Demand Supply Chain Solutions will enable you to reduce your supply chain risk, while also improving your overall supply chain performance.

Whether your goal is to improve sales revenue or customer satisfaction, ClearTrack can be a valuable resource in helping you meet your corporate objectives by ensuring that your products are in the right place at the right time, or more narrowly focusing on a specific supply chain initiative.

ClearTrack's solutions can significantly improve costs related to transportation

rates, distribution facility operating costs, asset utilization, carrying and accessorial costs, as well as help to reduce product cycle times and product markdowns.

However you elect to meet the ever changing needs of your organization's supply chain, you can count on the fact that your shareholder value will be influenced by how effectively your company meets those needs.

Market analysts, shareholders, and customers usually reward growing businesses that demonstrate regular earnings growth and satisfied customers with higher market value. They also tend to over react and severely punish those companies that slip up with product recalls or supply chain failures.

Why not let ClearTrack's On-Demand Supply Chain Solutions automate and improve your product-sourcing operations and processes to increase revenue, decrease costs and yield better margins, while ultimately achieving higher company value?
